

Why do you need a Cross-Connection Control Program?

**Become Compliant.
Protect Your Water Supply.
Communicate with Customers.**

PAWSC offers a Cross-Connection Control (CCC) Administration Program for utility, municipality, and privately owned water distribution systems to support enforcement of their cross-connection control programs. Ours is as complete start-to-finish outsourced solution- from sending compliance notices to tracking final compliance results. This program is ideal for water service providers who wish to maintain an effective cross-connection control program for their system to protect their customers and water supply, but are not equipped to handle all aspects of the process themselves.

Cross-Connection Control & Backflow Prevention Program

**A Complete Program
for Water Distribution
Systems**

BECOME COMPLIANT. PROTECT YOUR WATER SUPPLY. COMMUNICATE WITH CUSTOMERS

Become Compliant. Under the 1974 Safe Drinking Water Act, the PA DEP requires that customers eliminate cross-connection or install backflow prevention devices. This regulation applies to individual homes, businesses, and commercial and industrial establishments. *This regulation requires that backflow prevention devices be tested at least once a year.*

Protect your Water Supply. The goal of a cross connection control program is to protect the public potable water supply from the possibility of contamination or pollution by isolating, with its customer's internal distribution systems, contaminants or pollutants which could backflow or back-siphon into the public water system. *Through education, inspection and consistent monitoring of compliance, PAWSC is able to help utilities minimize the risk of contamination to its customers.*

Communicate with Customers. PAWSC offers services for a complete start-to-finish outsourcing solution. From sending compliance notices, to tracking final compliance results for water service providers who wish to maintain an effective CCC program from their customers and water supply - but are not able to handle all aspects of the program. *PAWSC Customer Service Representatives provide centralized administrative support to water providers, water customers, and backflow technicians.*

ABOUT Cross-Connection Control Enforcement & Administration Program

Ordinance/Policy Development

If you do not already have an effective cross-connection control (CCC) ordinance, policy or program, we can work with you to develop one that works best for your system. This is the first step towards proper cross-connection control enforcement.

Survey to Identify Cross-Connections

One of the first steps in enforcing a program is to determine where real or potential hazardous cross-connections exist. We will identify who should have proper backflow prevention devices installed and begin to notify them of the need (and importance) of compliance with the law.

Compliance Notification Mailings

We have an established mailing process that is designed to handle all cross-connection control compliance mailings up to shut-off posting for non-compliance. We will work with you to create the most appropriate compliance notices for your system. Once the designs are set, you can leave the printing, mailing, and postage up to us.

Public Education

Cross-connection control is important but very few people understand why. We provide educational material for water consumers on the dangers of inadequate cross-connection control and the importance of becoming compliant with cross-connection control laws.

Contact Brian Preski today to find out how this program can help you!

(888) 843-7155

Tracking Compliance Results

Using cross-connection control specific software, we keep track of your water system's compliance program year after year. This allows us to provide you with the most up-to-date and thorough compliance information for your water system down to the individual customer level.

Tracking Technician Licensing & Test Equipment Calibration

PAWSC will keep track of who is installing and testing backflow devices in your system. We make sure both testers and their equipment are up-to-date with the latest cross-connection control standards.

Training

Pennsylvania Rural Water Association (PRWA) and PAWSC work together to provide the best training in the industry. AND specific ASSE trainings have been approved for contact hours to go towards an operators license.

For a list of current classes being offered, go to: www.prwa.com/backflow.
