#7199

Preventing Major Events at Water and Wastewater Systems through Good Practice

6 WATER AND WASTEWATER CONTACT HOURS

Operators and superintendents must understand that many of the common practices utilized at water and wastewater systems can lead to potential major issues at their facilities, if not addressed. First, we will look at the lack of verification of even the very basic chemicals delivered to our facilities, document case histories where events have occurred, and show how simple and easy a verification program is to establish.

Topics to be covered:

- Chemical Delivery Verification
- DPD Issues
- Water Stagnation

#7200

Screening Water & Wastewater Systems for Safety, Security and Toxicity

6 WATER AND WASTEWATER CONTACT HOURS

Routine monitoring of your water quality and systems can lead to significant improvements in effective operations. This course covers daily and weekly practices that any operator can perform for better control of their water/wastewater system. The Activated Sludge Process has limitations in handling toxic influents of unknown origin and strength. Once the bug population is destroyed or inactivated due to toxicity, or loading issues, regrowth is a painful time consuming process.

Topics to be covered:

- Potential Wastewater Threats
- Safety/Security Issues
- Monitoring Parameters

**Instructor:
Mike Harrington**

Mike Harrington is a Certified Environmental Instructor (CET) and holds certification from Texas, Oklahoma, and Maryland in water, wastewater, and industrial wastewater. He has numerous years experience as an operator, as well as work experience with manufacturers and suppliers to the industry. For 25 years, Mike has been writing and presenting water and wastewater operator training to municipalities, training centers, and regulatory agency professionals across the country. He holds an undergraduate BS/BA degree from Columbia Union University, and continues to pursue a Master degree from Wilmington University.
