Call (800) 653-7792 ext. 107 or 108

Differing water sources dictate the need for differing chemicals used in water treatment facilities. The differing chemicals, dictate the need for differing feed equipment. The primary purpose of this course, Module 21: Chemical Addition, is to introduce students to the various chemicals and feed equipment used in a water treatment facility. Additionally, students will be directed on the need for safety measures and the use of material safety data sheets when handling various chemicals. Chemical feed calculations will be covered like detention time, feed rate, chemical active strength, and theoretical pump output. Additionally, students will be introduced to jar testing and pump calibrations. The purpose of this workshop is to provide students with the necessary study materials for the chemical addition (subclass 8) certification examination.

Topics to be covered:

- Understand use of Material Safety Data Sheets
- Identify Chemicals used in a Water Treatment Facility
- Understand Detention Time Calculations

Instructor:
Joel Jordan
Director of Education

Joel has been employed with PA Rural Water since 1997 and is currently the Director of Education. Previously, he held the position of Sourcewater Protection Program Manager and Specialist. Prior to PRWA, he worked as a Sanitarian and Regional Trainer for the PADEP/DEP Northwest Region and at a small-town water/wastewater system in the midwest. Joel's educational background includes a Bachelor of Science in Biology from University of Illinois-Urbana, Secondary Education Certification from Slippery Rock University and GIS certification from Penn State World Campus. Joel is a Certified PaWarn First Responder.
