#6711 - Common-Sense Practices of a Well Run Water/Wastewater Facility

6 WATER & WASTEWATER CONTACT HOURS

This program looks at two common misunderstood key elements to achieve a well run operation. First, we'll explore temperature & alkalinity, two of the most important measurement parameters an operator can make, but which typically take a back-seat in importance. Find out why understanding the key role they play, can lead to better process control. Next we'll investigate the 3 key operational practices most often ignored in the chemical feed process.

Topics to be Covered:

- Temperature
- Alkalinity
- Chemical Delivery Lab Tests

October 30, 2019:

#6712 - Sun-fire Ways to Coliform "Hit" in Your Water System .. or Worse

6 WATER CONTACT HOURS

This course looks at 5 little-known paths to potential introduction of pathogens. We'll review the typical disinfection protocol in repairs to distribution systems and examine basic sampling techniques. Then we will look at some of the little understood ways which lead to system contamination. Finally, we'll look at the most common residual based test methods. See how and why some common Chlorine test methods have little known interferences, and may even lead to false Free Chlorine residuals.

Topics to be Covered:

- Coliform Sampling
- Chlorine Testing Methodology
- Anomalies w/DPD Free Chlorine
- Distribution Repairs/Practices
