

#1074 Hands on Distribution Tools

6 WATER CONTACT HOURS

The quality of drinking water a system delivers to its customers can be affected by the age and condition of the distribution system. Proper repair and maintenance of the system is a must. How often a hydrant is flushed or a valve is exercised can make a difference. Proper tapping of a main can mean a flawless cut or a day of customers without water. The proper size and type of meter application can mean additional revenues to a system. This course is designed to give operators hands-on experience with distribution components and their proper installation, maintenance and use.

Topics to be covered:

- Hydrant operation and maintenance
- Valve operation and maintenance
- Corp and curb stops
- Meters
- Repair parts
- Tapping machines, sleeves and service saddles
