Water Leak Detection

4 WATER CONTACT HOURS

Our Nations most valuable resource is water. This course is designed to instruct water company personnel in proper leak detection techniques through classroom and hands-on training. The idea of leak detection is to prevent water loss and unaccounted for water in small systems. Leak detection also prevents property damage, thus reducing cost and down production time to the water utility.

Important!

Masks are required by all attendees at PRWA training seminars.

Prior Authorization is required by our office if you are unable to wear a mask.

October 21, 2020

Quality Inn

300 Tarentum Bridge Road
New Kensington, PA 15068

Westmoreland County

Class Time: 8:00 am - 1:30 pm

Registration: 7:30 am

Lunch and materials provided with your training class registration

THE PRWA PROMISE

If you're not 100% satisfied with the training class for any reason, we will give you a refund!

MEET THE INSTRUCTOR

Chris Shutt
Wastewater Technician

Chris is a certified water and wastewater operator, as well as a Certified PaWARN First Responder. Chris has been with PRWA since 1992. Over the last 20+ years, Chris has developed an expertise in distribution and collection systems with his work in line locating, leak detection, and smoke and camera work. Prior to joining PRWA, Chris was the operator manager of a system for 15 years.

Method 334.0

Is it time for your instruments Routine Calibration Verification?

In September 2009, the Environmental Protection Agency (EPA) published Method 334.0. In 2018, the Pennsylvania Department of Environmental Protection (DEP) required compliance of Method 334.0. Specifically, Pennsylvania drinking water systems are expected to follow Method 334.0 if they use a handheld, benchtop or on-line chlorine analyzer for any of the following:

- compliance monitoring at both the entry point and in the distribution system;
- monitoring used to obtain results for calculating log inactivation;
- or chlorine monitoring required as part of a permit condition.

In short, all community water systems and any noncommunity water system with surface water or 4-log treatment are required to follow Method 334.0.

To verify on-line analyzers and become Method 334.0 compliant systems must complete:

- The field sampler initial demonstration of capability. This is required for any individual who conducts chlorine analysis at the water system.
- The initial calibration verification is required for any handheld or benchtop analyzer used for chlorine analysis or used for comparison grab sampling within Method 334.0.
- Routine calibration verifications are required quarterly (at least every 90 days) for any handheld or benchtop analyzer used for chlorine analysis or used for comparison grab sampling within Method 334.0.

Many systems have done initial demonstration of capability for individuals who conduct chlorine analysis and have completed initial calibration verifications. To maintain Method 334.0 compliance, systems must complete Routine Calibration Verifications.

PRWA will have staff at this training seminar to perform Routine Calibration Verifications for participating systems instruments.

Operators can choose to attend only the seminar, attend the seminar and have equipment verified, or just have the equipment verified.

In addition to the instrument in need of routine calibration verification, paperwork specific to method 334.0 will be needed including:

- Initial calibration verification
- And, if completed at any time, quarterly instrument verification

In addition to the instrument(s) to be verified, the PRWA staff will need clean sample glassware. Additionally, if the instrument cannot be verified using a DPD pillow packet, the specific chemical/reagent needed should be provided.

Cost:
\$39 per Instrument

#317 - Water Leak Detection

Please select an option:

- Training Class Only
- Method 334.0 Quarterly Verification Only
- Both Training Class & Method 334.0 Quarterly Verification

Number of Instrument(s):

\$39 per instrument

**In addition to clean sample vial, do not forget to bring Initial Calibration Verification & Routine Calibration Verification paperwork for each instrument to be verified.*
