Water Well Rehabilitation: Water Well Problems & Effective Solutions

6 WATER CONTACT HOURS

It is common for wells to experience lost capacity and a variety of water quality problems as they age. Most of the problems occur in wells as a result of material becoming deposited on the surfaces (rock surfaces, gravel pack, well screen) in water environments. Well rehabilitation involves removal of all deposited material that will allow the specific capacity to be restored or the water quality problem to be solved. Some of the techniques used for rehabilitation (Aqua Fredd) are relatively broad range in their ability to disrupt and remove a wide variety of plugging deposits. Significant experience with variety of well rehabilitation technologies will be presented.

Topics to be covered:

- Economic Advantages of Efficient Water
- Typical Well Construction Methods
- Understanding Problems of Wells
- Well Rehabilitation Methods
- Pump Fundamentals
- Case Studies
- New Concepts in Well Maintenance

Important!

**Face Coverings are required by all attendees
at PRWA training seminars.**

*Prior Authorization is required by our office if you
are unable to wear a Face Covering.*

Instructor:
Neil Mansuy

Neil Mansuy has approximately 35 years of extensive, worldwide well problems and rehabilitation experience. Neil holds a M.S. degree in Ground Water microbiology specializing in iron-related bacteria and causes of well plugging. Neil has become recognized as a leading authority on well rehabilitation. During the past thirty five years of related experience, assessment of well problems and recommending cost-effective solutions has been performed on thousands of wells across the U.S. and around the world. Neil has the unique combination of extensive multidisciplinary understanding of well problems and the experience to recommend the most cost-effective solutions. Neil currently works for Subsurface Technologies as Vice President of technical services.
