Questions?

Call (800) 653-7792 ext. 107 or 108

The quality of drinking water a system delivers to its customers can be affected by the age and condition of the distribution system. Proper repair and maintenance of the system is a must. How often a hydrant is flushed or a valve is exercised can make a difference. Proper tapping of a main can mean a flawless cut or a day of customers without water. The proper size and type of meter application can mean additional revenues to a system. This course is designed to give operators hands-on experience with distribution components and their proper installation, maintenance and use.

Topics to be covered:

- Fire Hydrants - O&M and Security
- Gate, Butterfly and Check Valves
- Main to Meter Products - stop, fittings, meter boxes, yokes and settings
- Pipe Repair Products - saddles, sleeves and clamps
- Drilling and Tapping Water Lines
- Tips from the Field

The Mueller Traveling Training Team has extensive knowledge from around the United States and is available once every four years in this area. Be sure to reserve your spot today.
